## Memorandum

To: Distribution

From: Paul Ferry, P. E.  
Preconstruction Design Engineer

Date: January 16, 2004

Subject: Temporary Pavement Markings

The Construction Bureau has informed us that interim striping rather than temporary pavement markings is placed on top of the seal and cover. Due to the requirements that the final epoxy pavement markings cannot be applied for a minimum of 30 days after the completion of the seal and cover operations, the use of temporary pavement markings on the seal and cover is not practical.

Consequently, we will no longer provide a course of temporary pavement markings for the seal and cover. This supercedes the information in Section 5.4.4.1 of the Road Design Manual.

If you need additional information please contact me at 444-6244
